# Chime Master®

Digital Electronic Carillon System from Chime Master® Systems

MODEL  
**SIX**  
CARILLON  
FLASH  
SS  
Memory

**From celebratory events to sorrowful rites**, bells evoke an emotional response in all of us. The hourly clock strikes, favorite hymns, and ringing peals unite congregations and communities, eliciting strong feelings of faith, hope, and duty. Our most popular electronic carillon offers the clarity of real bells, at a fraction of the cost. With automated Daylight Savings Time adjustments and seasonal music substitutions, this carillon truly allows you to set it and forget it. Our musical instruments provide years of dependable, maintenance-free use. That's why thousands of churches rely on Chime Master Systems.

## FEATURES

The Standard Five-Year Warranty covers all carillon components.

The library of beautiful digital recordings of bells and music is safely stored inside the carillon on flash memory.

Selections include:

- Call to Worship/Mass bells
- Festive Pealing Bells
- Funeral Toll counts to 199
- Taps on bugle, for military funerals
- Prayer and Angelus Bells
- Hundreds of general and seasonal hymns, as well as music for special occasions.

**Access your favorite chime music or bell ringing by title** on the easy to read display. Then save it to a one-touch function button so you can activate it any time using the remote control.

**SmartAlmanac™** automatically substitutes seasonal music at the appropriate times. It remembers the dates for Easter and other seasons for each year, through the end of the century. Random music groupings allow you to select the musical style that you wish to play at any particular time.

**Flexible clock striking capability** can strike the hour with or without a preceding Westminster melody. Clock striking has automatic schedule priority over other ringing programs.

**Clock** accurate to within one minute per year and can be synchronized to the GPS system with an optional receiver.

**The elegant, clearly labeled front panel** and simple programming screens intuitively guide you through setup and scheduling. The weekly schedule editor lets you play any selection at any time.

**Scheduled-AutoLevel™** control has 8 volume level settings. Set it to be quiet for morning and evening, louder for high-traffic times.

**ZoneAutoMute™** intelligent inside/outside switching.

**The built-in speaker** has its own level control on the front panel.

**Automatic power outage recovery** checks the schedule and clock to ensure that the system will ring only when it is programmed to ring. A ten-year battery preserves the schedule and runs the clock during a power outage. Optical isolation and transient voltage suppressors protect the system from electrical storms and power surges.

## Connections

- Audio Line Output to Tower Amplifier
- Audio Line Output to PA System Mixer
- USB Computer Port

## OPTIONS

Premium outdoor speakers shown with aluminum roof bracket.

Multi-Function Remote

Telephone Remote

Pocket Remote

Clock Control
